Quick network guide

To connect to the ASSEMBLY network, you need a 10/100 Mbps Ethernet card with an RJ45 connector and 5-10 meters of Ethernet cable.

- Connect your network card to the switch located in the center of the table group. If your computer is on, a green light should appear above the socket.

- The network uses the TCP/IP protocol. All IP-addresses and other configuration data is dealt out using DHCP. Make sure that TCP/IP and DHCP are turned on in your network settings.

- Remember to disable all DHCP servers! E.g. Windows XP comes with a DHCP server and if it is not disabled, PartyNet will not work correctly.

- WLAN is available for limited use. Network name (SSID): ASSEMBLY. No encryption or authentication. Network type is infrastructure / access point.

- If your settings are correct and the network still doesn't work, try rebooting before you contact the Infodesk.

- Always use antivirus and firewall software to protect your computer!

- You can find the complete instructions at www.assembly.org. Ask your neighbor to get the instructions for you from the site. If nothing helps, contact the Infodesk in the First floor.
